County of Kauai, DMV Health and Safety Requirements

From the outset examiners have been at the center of the decision-making process. This has allowed us to come to agreement on how to safely restart road testing. As a result of the discussion, five (5) points were agreed to by both examiners before a road test would commence:

1. **A health assessment would be performed.**
   a. Before in-processing the applicant, a staff person would:
      i. Take the temperature of the applicant, any other passengers and themselves using a no-touch thermometer, and if it falls between an acceptable range (below 100.4 F or 38 C)
      ii. Ask four questions of the applicant:
         1. Have you taken any Tylenol, Aspirin or Ibuprofen in the last Six (6) hours?
         2. Are you presently exhibiting any flu-like symptoms?
         3. Is anyone in your household exhibiting any flu-like symptoms?
         4. Have you traveled outside of Hawaii within the last two weeks?

   If their temperature was within the range of acceptable and they answered “No” to the questions, all participants would sign the affidavit form and would be allowed to proceed with the road test.

   If their temperature was not within the acceptable range and/or answered “Yes” to any questions of the questions, the examiner would reschedule the road test appointment at least 14 days from that day.

2. **Wearing of face masks would be mandatory**
   All passengers in the enclosed vehicle would be required to wear masks. If the applicant refuses to wear the mask before or during the examination, the test would be scheduled to a later date by the examiner. If during the road test, the applicant refuses to continue to wear mask, the road test will terminate, and the applicant will immediately return to the driver license office. Masks are not required for the Pre-Trip Inspection & Basic Control Skills test portion of CDL tests. Customers must supply their own masks.

3. **Air conditioning system will remain off**
   During the road test and all windows of the vehicle would be rolled down to maximize air flow. If the applicant refuses to not turn off the air conditioner and/or not agree to roll down the windows, the road test would be rescheduled to a later date by the examiner. If during the road test, the applicant turns the air conditioner on, the road test will be terminated, and the applicant will immediately return to the driver license office.

4. **Hand sanitizer will be provided** to the examiner(s) to use before, during and after the road test. Upon completion of the road test, the examiner is encouraged to wash their hands using soap and water.

5. **Under COVID-19 conditions,** conducting road tests by any examiner will be voluntary. Examiners would be afforded the opportunity to opt in by agreeing to, willing to conduct road tests. If any examiner does not feel they are ready to return to conducting road tests, we could use their skills on the counter in-processing.
