Electric Vehicle Charging Station rebate incentives program opens

To ring in the New Year, the State of Hawai'i, under contract with the Hawai'i Public Utilities Commission, began the Electric Vehicle Charging Station (EVCS) incentives program. The EVCS incentives program will supply rebates for the installation of shared-use EV charging stations and is available to businesses, residences, and institutions.

To qualify, the EVCS must serve EV fleets, be made available for public use, or serve multiple tenants, employees, or customers. New installations can receive up to \$4,500 per multi-port, networked Level 2 EVCS, and \$35,000 per networked DC fast-charging EVCS. EVCS retrofits may receive up to \$3,000 per multi-port, networked Level 2 EVCS, and \$28,000 per networked DC fast-charging EVCS.

In total, the program allocates \$400,000 in rebates for projects completed through June 30, 2021. Hawai'i Energy will administer the EVCS rebate funding in two rounds: \$150,000 for projects completed between Jan. 1, 2020, through June 30, 2021, and \$250,000 for projects completed July 1, 2020, through June 30, 2021.

Visit HawaiiEnergy.com for program terms and conditions, project eligibility, or to apply for the rebate. Funds are limited, and completed applications are accepted on a first-come, first-served basis, so be sure to check Hawaii Energy's webpage for updates on remaining available funds.
