COMMUNITY NO. PANEL NO. SUFFIX DATE OF FIRM FIRM ZONE BASEFLOOD ELEV./NGVD '29

CERTIFICATION BY A LICENSED PROFESSIONAL ENGINEER OR ARCHITECT

I certify that based upon the attached engineering design and plans for construction that the design and methods of construction are in accordance with accepted standards of practice for meeting the following provisions: (Initial all that do apply)

___ That the new construction and substantial improvements encroaching within the Floodway will not result in any increase in the base flood levels.

___ All new construction and substantial improvements will have the space below the lowest floor free of obstructions or constructed with breakaway walls. Such space will not be used for human habitation, but will be useable solely for vehicular parking, building access or storage. Breakaway walls have a safe design loading resistance of not less than ten and no more than twenty pounds per square foot. Breakaway wall collapse is designed to result from a water load less that which would occur during a base flood and the elevated portion of the building is designed so as not to incur any structural damage from wind and water loads acting simultaneously during a base flood.

___ New construction and substantial improvements will be adequately anchored to prevent flotation, collapse or lateral movement resulting from hydrodynamic and hydrostatic loads, including the effects or buoyancy.

___ New construction and substantial improvements will be constructed with:

   a. materials and utility equipment resistant to flood damage and,

   b. electrical, heating, ventilation, plumbing, air conditioning, wastewater, and other service facilities designed or located or located so as to prevent impairment and the entry, accumulation or contamination of flood waters.
